DESCRIPTORS: *Chlorates, *Electrolysis, Theory,
Chemical reactions, Reduction (Chemistry), Sodium
compounds, Chlorides, Viscosity, Electrochemistry.

The mechanism of the chlorate electrolysis can be explained as follows: Dissolved chlorine formed at the anode reacts in the main electrolyte body with alkali from the cathode under formation of hypochlorite. The amount of hypochlorite, which does not reach the cathode outside of the electrolytic cell for auto-oxidation to chlorate, is destroyed by cathodic reduction to chloride.
